
Instagram Manual Testing Project

Tester: Anant Negi

Project Type: System Testing (Manual)

Platforms Tested: Android (Realme Narzo 20a – Android 11), Windows 11 (Lenovo LOQ i5 12th Gen HX)

Project Objective

To perform end-to-end system testing of the Instagram application focusing on core modules including authentication, feed, navigation, multi-account handling, and direct messaging.

The goal was to validate functional correctness, stability, cross-platform behavior, and defect reporting process following STLC.

Modules Covered

- Login
 - Signup
 - Forgot Password
 - Home Feed
 - Navigation
 - Multi-Account Navigation
 - Direct Messaging (Basic, Media, Stability)
-

Testing Types Performed

- Functional Testing
 - Non-Functional Testing (Stability, Network Handling)
 - Regression Awareness
 - State Transition Testing
 - Boundary Value Analysis
 - Cross-Platform Testing
 - Multi-Device Sync Testing
 - Black Box Testing
-

Test Case Metrics

- Total Test Cases Designed: 150+
 - Total Test Cases Executed: 80+
 - Platforms Tested: 2
 - Defects Identified: 1
 - RTM Prepared: Yes
 - Execution Reports Created: Yes
 - Evidence Captured: Screen Recordings
-

Sample Defect Logged

Bug Title: Home Feed Refresh Fails on Windows App

Severity: High

Priority: High

Status: Logged

Tools Used

- MS Excel / Google Sheets
 - Manual Test Case Documentation
 - Screen Recording for Evidence
 - Google Drive Structured Repository
-

STLC Followed

1. Requirement Understanding
 2. Test Case Design
 3. Execution
 4. Defect Logging
 5. Retesting Awareness
 6. Test Summary Reporting
 7. RTM Update
-

Key Learnings

- Cross-platform behavior differences (Android vs Windows UI)
- State handling in DM (Sent → Delivered → Seen)

- Network interruption handling
 - Multi-account session retention
 - Defect documentation and lifecycle awareness
-
